

# Help employees take their office where work takes them.

**Verizon Mobile Office helps mobile and remote workers get all of their work done simply and efficiently on their mobile devices.**

**There's a major shift to mobile and remote work becoming the new normal in business today. And employees want a seamless communication and collaboration experience on a mobile device like they have on a desktop or laptop PC.**

---

## **Improve workforce mobility and agility while reducing complexity.**

Verizon reimagined the office experience with Mobile Office. The solution makes mobile and remote working simple and cost-effective by enabling employees to use collaborative cloud-based services, with their mobile device and accessories providing a primary communication tool. The result is improved communication and collaboration—right from an employee's mobile device.

The Mobile Office workforce productivity platform combines Verizon One Talk, a mobile unified communications solution, with team collaboration solutions—BlueJeans Meetings and Google® G Suite.® All of this and the latest mobile devices and accessories in one solution, to transform the mobile employee experience.

**Verizon Mobile Office features leading mobile communication and workforce collaboration solutions combined with mobile devices and accessories, including:**

- **One Talk**
- **BlueJeans Meetings**
- **Google G Suite**
- **Most Samsung® 4G and 5G mobile devices<sup>1</sup>**
- **Samsung DeX® docking station**
- **Bluetooth® keyboard and mouse**
- **Monitor with HDMI capability**

Typically, employees use desk phones in the office, then they have their calls forwarded to their mobile device when on the go. They also carry laptops or tablets but can still be challenged to streamline communications and collaboration.

Now with Mobile Office, employees have access to more than 50 One Talk communication features combined with BlueJeans Meetings and G Suite on their mobile device to easily improve how they communicate and collaborate. This way, the solution eliminates the need for a laptop, a desk phone and conference room equipment.

**An IDC study reports that 25% of employees use a mobile phone as their primary device for business communications 75% to 100% of the time.<sup>2</sup>**

---

## **Create a collaborative mobile experience.**

Mobile Office helps employees take advantage of leading productivity and collaboration applications to work better together and boost efficiency.

### **One Talk**

Provides employees with one number that can be shared with multiple compatible mobile devices, reducing missed calls and helping workers stay reachable while on the move. PBX-like features, including voice calling, automated receptionist and 6-way calling, are available as a mobile-first option.

### **BlueJeans Meetings**

Delivers HD-quality audio, video and web conferencing using compatible mobile devices and supported browsers. Mobile and remote workers can instantly collaborate with up to 75 people through high-quality video conferencing. With BlueJeans added to a One Talk-enabled mobile device, both solutions work together to drive improved communications and collaboration.

---

### Google G Suite

Offers Gmail,<sup>®</sup> Hangouts,<sup>™</sup> Google Calendar,<sup>™</sup> Google Drive,<sup>™</sup> Google Slides,<sup>™</sup> Google Docs,<sup>™</sup> Google Sheets<sup>™</sup> and more mobile apps in one package. G Suite helps mobile and remote employees quickly reach out to colleagues, store files and find what they need to work collaboratively. It also makes it possible to manage users and devices and to share data securely and easily.

### Mobile Office accessories

Connect your employees' compatible mobile devices to a monitor with HDMI capability using the Samsung DeX docking station. Plus, employees can use a Bluetooth keyboard and mouse, making it easier to get all of their work done from their mobile device.

---

### Bring desktop capabilities to mobile devices.

With employees connecting from different locations, business leaders must enable them to work reliably, cost-effectively and productively in a variety of environments. Mobile Office provides the versatility to do this. A One Talk-enabled mobile device easily connects with collaboration applications, allowing employees to set up conferences with up to 75 people and create, edit and share documents.

Mobile and remote employees can do work they typically do on a laptop using their mobile device—easily and securely. They'll have the similar user experience and functionality they have on browser and desktop applications but with the added benefits of staying mobile and using less office equipment.

Mobile Office combines essential communication technologies, making it easier to bring people, data and applications together and stay productive in or away from the office. And using the high throughput of Verizon 4G LTE and 5G connectivity, Mobile Office allows employees to collaborate productively without being tied to a LAN, WAN or public Wi-Fi. Plus, data stays safe. Files and confidential business information can be stored securely in the cloud instead of on employee mobile devices.

---

### Why you can rely on Verizon

Untether employees from traditional ways of working and transform their mobile experience with Mobile Office running on the Verizon 4G LTE and 5G Ultra Wideband networks. It's a true mobile-first solution for businesses with growing mobile workforces. And with America's most reliable network,<sup>3</sup> your critical mobile voice, data and video communications can help employees stay productive and collaborative on the go.
