

A rugged phone for the people handling the toughest jobs

In an emergency, reliability and simplicity are critical.

Use case

Challenges

First responders rarely have a moment to spare when lives or property are on the line. Dialing a smartphone too often takes attention and time. Moreover, responders can't worry about dropping a phone or cracking a screen while wearing gloves or other protective gear, and most phones are too fragile to withstand the rigors of emergency response.

Benefits

In the moments that matter most, reliable communication is critical. The Galaxy XCover Pro is purpose-built for emergency response, with ruggedized construction that's dust-free, waterproof and secured with the Samsung Knox® security solution. It works seamlessly with the Verizon network to help keep responders and the public they serve safe and connected.

Solution

The Samsung Galaxy XCover® Pro is one of the only mission-critical push-to-talk (MCPTT) smartphones available, so responders can focus on the task at hand without fumbling with contact lists and dial pads. And when first responders, like Verizon Response Managers, are mobilized, responders can create geofenced danger zones as well as set up group chats and channels, all while sharing locations, images and videos during a deployment.
