

Could a better network help you deliver better care?

Learn how Verizon Internet Dedicated Services with Cisco Meraki and 4G LTE backup provides secure, reliable connectivity so healthcare organizations can focus on delivering quality care.

Challenges

Healthcare providers are increasingly reliant on internet connectivity. They need it to communicate with other staff, access online medical records, view imaging results electronically and consult with patients via telemedicine platforms. Online clinical guidelines and electronic decision-making tools also give them important resources for treating patients.

Patients expect to use Wi-Fi when they're in a healthcare facility. And they want to be able to reach their providers and access their records through electronic portals.

A dependable, secure network is critical to providing all of that. If the network goes down, valuable time is wasted, and patient care could suffer. However, too much network complexity can waste staff time, raise costs and put security at risk—especially at satellite clinics with limited IT expertise on staff.

Solution

Verizon Internet Dedicated Services with Cisco® Meraki® and 4G LTE backup provides an easy-to-use solution to help healthcare organizations provide the high-quality care their patients need.

The key components work together as a complete solution:

- Verizon Internet Dedicated Services gives organizations an always-on, dedicated connection with quality of service (QoS) to prioritize key applications, robust service-level agreements (SLAs) and optimized speeds up to 400 Mbps

- Meraki offers the latest network routing hardware and software-defined wide area network (SD-WAN) connectivity, easily managed through a cloud-based dashboard and protected by state-of-the-art Meraki MX Unified Threat Management security
- 4G LTE backup provides automatic failover to the nation's most reliable 4G LTE network¹
- Installation, technical support and concierge service from Verizon Care make using the solution easy

Benefits

Verizon Internet Dedicated Services with Meraki and 4G LTE backup provides secure access to online tools and information that can facilitate collaboration and aid in healthcare decision making.

It helps providers more easily comply with electronic medical records requirements and HIPAA regulations and allows them to communicate securely with patients.

The solution simplifies networking, so healthcare organizations can focus on their biggest priority—providing quality care.
