A simple way to fortify your network edge.

Unified Security Services

Managing network edge security isn’t easy—especially if you have many sites. More locations mean more entry points, leaving you exposed to an ever-expanding variety of threats. And as your business grows, so does the complexity of managing the risk those threats create.

Organizations often use a variety of devices from different vendors performing different functions, taking a piecemeal approach to network edge security. But setting up and managing these disparate devices isn’t just a headache—requiring a dedicated security team—it’s costly, too. And that makes it hard to get the most out of your investment.

Unified Security Services from Verizon is a simple but powerful solution that helps you protect your network edge. You’ll be able to stop worrying about making multiple security technologies work together, and the new security risks that can result when they don’t. And because the service is managed and monitored by our experts, your in-house staff can focus on more strategic efforts.

Security technologies that work. Together.
Our solution can take some complexity out of your organization, with three tiers of service and technologies that are designed to work together and help you plan for, see and respond to threats more effectively.

Basic tier
Includes entry-level features and a platform that can support more advanced tools as your security needs change.
- Network firewall
- Virtual private network (VPN)
- Gateway-based anti-virus and anti-spam

Intermediate tier
Provides a full set of features for unified threat management, plus a platform for expansion. Includes everything in the Basic tier, plus:
- Web content filtering
- Intrusion detection system
- Intrusion protection system
- Layer 7 application controls

Advanced tier
Provides high-end security and service quality features. Includes all Basic and Intermediate features, plus:
- SSL-encrypted traffic inspection
- Data loss prevention
- Voice-over-IP (VoIP) traffic shaping
- Explicit proxy web optimization

Backed by experts.
Keeping the edge of your network secure is a full-time job. Partnering with Verizon gives you access to a team of dedicated professionals with the knowledge and experience to help you defend against attacks anywhere your network takes you.

Unified Security Services shifts the burden of monitoring and managing security at your network edge to our Managed Security Services team, providing you with:
- 24x7 security event and device availability monitoring
- On-demand access to security support team via phone, e-mail or web-based portal
- Security device OS upgrades and patch management
- Ongoing security threat management subscription feed

Expand your reach without compromising security.
With Verizon, you get the global reach and reliability of one of the world’s largest networks. Now there’s one more reason to choose our network. Unified Security Services can simplify your network security and help you defend against threats more effectively, all while managing cost and complexity.
