

Nobody will know it's a backup plan.

With Cisco®, we bring you
4G LTE business continuity.

Business continuity requires reliable technologies and a network you can count on. Whether your business continuity plan works and how quickly you can recover depends on them.

Stay connected with a reliable, easy-to- deploy WAN wireless solution.

The unexpected happens.

It always does. When downtime challenges productivity, we help you stay connected with a reliable, easy-to-deploy WAN wireless solution—the Cisco 4G LTE Enhanced High-Speed WAN Interface Card on the Verizon 4G LTE network.

When coupled with a Verizon Wireless data plan, the Cisco 4G LTE EHWIC protects against line outages and disruptions. The solution also includes an additional level of connectivity and promises low-latency links at high speeds.

What are the benefits?

- Trusted and effective business continuity
- Enterprise-class 4G LTE wireless WAN
- Supported on Cisco Integrated Services Routers G2
- Data, voice and video ready
- Networking expertise and innovative solutions
- Cost-effective deployment, management and installation

Quicker is better.

The Cisco 4G LTE EHWIC lets you run applications like interactive video and telepresence on Verizon's 4G LTE network, which is 10 to 15 times faster than 3G. You can deploy and manage the same device for multiple applications—simply and reliably. And when it's time for a rapid setup or temporary connectivity, 4G LTE WWAN helps you launch a new site quickly.

Together, Cisco and Verizon bring you business continuity solutions that help you maintain network availability.
