

How to make remote working much easier.

Today's workers carry smartphones that connect them with colleagues and job tasks when they're on the go.

Do you think maintaining a Centrex infrastructure can support these shifts in communications technologies and behaviors? **Hint: Centrex can't.**

Today's workforce is mobile and want to accomplish virtually anything without setting foot in the office.

Collaboration apps have exploded in recent years, and now even most basic business software – to make spreadsheets, documents, and presentations – has become cloud-based and portable.

Yet, many organizations are not keeping pace. Is your organization stuck in an old-school phone system, not able to respond to today's workforce and customer demands?

Many of today's managers have some of these questions and concerns:

- Are my employees really working?
- How do I know?
- When I can't see my employees, how can I stay connected?
- Flex employees, often working remotely, make my job more complicated.

Why should you change?

Professionals in a modern digital workplace must live, learn, play, think, and work together better, often virtually, across organizational and other boundaries. Collaboration may be the critical success factor for employee effectiveness.

The best way to succeed is to use the right communications platforms.

More often than not, transferring content to a mobile device, accessing it and sharing it still isn't as easy as it should be.

Flexible scheduling and work-from-home opportunities play a major role in people's decision to take or leave a job. That's especially true for the Millennial generation, who are accustomed to doing nearly everything on their smartphones, in both their work and personal lives.

More and more people in today's workforce want the flexibility to work from home or other locations, requiring better mobile connectivity and collaboration.

This is a software problem and it's holding back many businesses. Not only can it eat away at employee

productivity, but it can also affect a business' ability to respond quickly to customers.

Fortunately, rapid innovation in cloud-based communications platforms has provided the solutions that a mobile, digital workforce is seeking. It's time for every business to re-evaluate how they conduct their digital communications.

You shouldn't have to compromise on the services your business needs or on where they can go. Verizon offers a complete VoIP solution that allows you to get closer to your customers and equip your workforce with the communications tools they require to drive a competitive advantage – where and when you do business.

Consider Verizon Virtual Communications Express and Verizon's technology partner, BroadSoft. With Virtual Communications Express you can meet your company communications needs with little to no hassle. This business VoIP solution helps you to better leverage your resources by using the seamless nature of the cloud, allowing you to make remote and mobile workers "office" workers. Verizon and BroadSoft have the migration services also available so the transition has little effect on your teams' productivity or your business.

Learn about how Virtual Communications Express can help your company manage costs and resources. Contact a Verizon Enterprise Solutions representative or visit our site for more information today.
