Educate virtually anywhere.

How K–12 schools can maintain educational continuity in a shifting environment

With the impact of the coronavirus (COVID-19), school districts throughout the United States are implementing their educational continuity plans as schools shut down their campuses. While some K–12 schools are readily able to shift from onsite to online classrooms, many others are challenged with underserved districts where offsite e-learning tools are not available. Verizon is here to help.

K–12 continuity guidance

Here are some ways your schools can address the changing educational environment:

• Review e-learning continuity plans
• Decide upon the e-learning structure your school will employ, including software platforms and applications
• Identify the students who need internet/device access to virtual classrooms
• Leverage your IT support personnel to help shift from onsite to offsite learning
• Train faculty, staff and students to use remote tools

Verizon is here to help with all stages of your plans to maintain continuity in this difficult time, whether it’s helping you plan, training your workforce, implementing solutions or helping at any other stage of the process. We’ve got your back.

Verizon solutions that can help

As you shift from onsite to offsite learning, Verizon is here to help with tools that can effectively aid in the transition.

Phone continuity

When a school is closed due to an unforeseen event, faculty and staff need a quickly deployable solution, like One Talk, that allows for continued communication to parents and students.

Remote call centers

Empower your faculty and staff to support parents and students with solutions like IP Toll Free, which allows them to reach you at no cost to them, and IP Interactive Voice Response (IP IVR), which provides automated call-center information and phone-tree navigation. When working onsite isn’t feasible but students still need access to resources, these solutions can create the virtual connection between parents and students and their school.

Virtual classrooms

Easily create a virtual classroom experience with mobile broadband hotspot solutions that don’t require existing internet service. A mobile broadband instant hotspot enables access to conferencing tools like BlueJeans by Verizon and Verizon Audio Conferencing.
