Detect threats before they seriously damage your business.

There are more new cyber threats emerging today than ever before. Do you know how to spot the ones that are most likely to impact your business, so you can respond faster?

Uncover the threats that really matter. Find out how we can help you identify new threats quickly and give your security team the insight you need to mitigate risk more effectively. Contact your account representative for more information, or visit: VerizonEnterprise.com/products/security/security-monitoring-operations

An increasingly connected world—driven by cloud and mobile—and a dramatic rise in cyber crime have made incidents harder to detect.

According to our research:

- In a recent Forrester survey, enterprise security decision makers identified the same pain points.
- Changing and evolving nature of IT threats
- IT environment complexity
- Unavailability of security staff with the right skills
- Managing cyber security has never been more complex.

Businesses are facing real challenges.

By analyzing data sent from your security devices, we can flag the threats that are most likely to disrupt your business and deliver actionable insight to your IT team. That means you can:

- Effectively manage risk and maintain continuity.
- Quickly understand what happened in seconds.
- Close the gap between time of compromise and time to discover.
- Address security compliance requirements.
- Control the operational cost of threat detection.
- Freely manage threat detection on your terms.
- See beyond network and edge threats you already know about.
- Effectively manage risk and maintain continuity.
- Close the gap between time of compromise and time to discover.
- Address security compliance requirements.
- Control the operational cost of threat detection.
- Freely manage threat detection on your terms.
- See beyond network and edge threats you already know about.

Verizon Managed Security Services can help.

The experts at our security operations centers have the knowledge and expertise to help you mitigate risk and maintain continuity.

To keep up, you need to catch incidents early in the attack chain. Do you have the right resources and technologies in place?
