

Your water system needs an upgrade and it's easier than you think.

Grid Wide Intelligent Water simplifies water system modernization. It's an Internet of Things (IoT) platform-as-a-service offering that delivers actionable insights to help utilities remotely monitor water consumption, reduce non-revenue water, and improve infrastructure and sustainability efforts.

What does a trillion gallons of water look like?

- 40 million swimming pools
- 24 billion baths
- Fill the Rose Bowl 12,000 times

The U.S. is one of the biggest water consumers in the world.

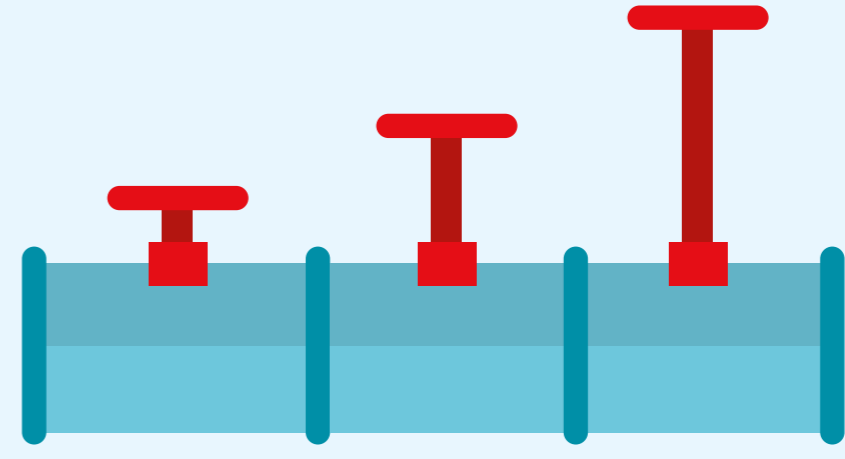

Its footprint is 1,053 billion cubic meters of water.²

Growing demand demands growth.

As water consumption grows, utilities have to find new ways to manage the demand.

Grid Wide allows you to:

- Detect leaks.
- Manage water quality.
- Monitor consumption.
- Remotely monitor assets.
- Get daily and interval meter reads.
- Get event notifications, analytics and reporting.
- Deploy smart meters.

And Verizon manages and hosts it all.

Grid Wide is a platform-as-a-service offering. So you use only what you need.

We can help:

- Improve conservation.
- Increase efficiency.
- Improve quality of supply.
- Reduce non-revenue water.
- Enhance your customer service.

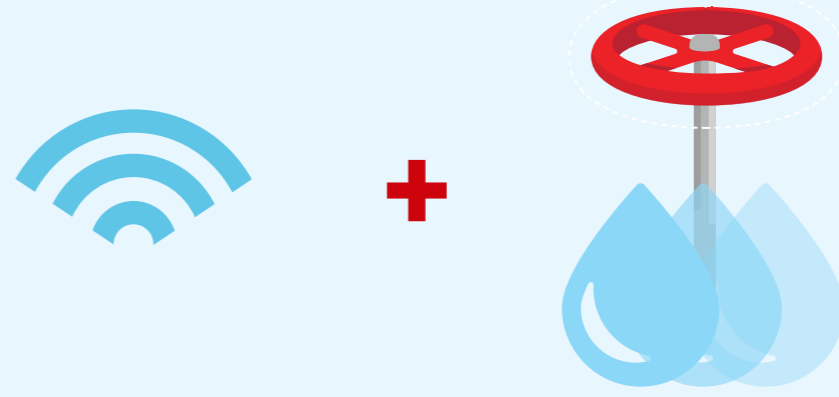

And it doesn't require:

- High capital investment.
- Specialized hardware.
- Lengthy deployment timelines.

Better water management on a better network

Give your customers better service with an intelligent water system running on a better network.

Why Verizon

Verizon can provide federally certified mobile solutions for your transition to the digital government initiative.

Join the 99% of Fortune 500 companies that rely on America's largest and most reliable 4G LTE network.

Contact a Verizon representative for more information about Grid Wide.
