The world is accelerating at an exponential pace. Pandemics, cybersecurity threats and new ways of working require network evolution and innovation for businesses to meet the needs of today's always-on users and dynamic applications.

Blaze a path to innovation with Network as a Service.

68% Senior executives who say they are rethinking their long-term strategies in the post-pandemic environment.

Top planned technology investments
Senior executives who say they’ll focus on emerging technology investments once the immediate economic impact of COVID-19 has ended:

- Cloud: 68%
- Data analytics: 71%
- Core network: 62%
- Cybersecurity: 71%
- IoT: 61%
- Economic modeling: 71%
- Marketing: 62%
- Connected vehicles: 61%
- Augmented reality: 68%
- Predictive maintenance: 71%

Verizon NaaS: Enable the future of business.

The Verizon Network as a Service (NaaS) platform uses a virtual software-based network model to more effectively deliver services. This can enable organizations to optimize resources, better support their IT and take performance to a higher level, as well as support use cases like robotics, autonomous vehicles, advanced analytics and augmented reality.

Drive ambitions.
Reliability: Customer analytics, interactive storefronts, virtual fitting rooms
Financial services: Blockchain payments, economic modeling, market-moving data visualization
Manufacturing: Robotics, predictive maintenance, intelligent supply chain
Energy/Utilities: Smart metering, smart grids, real-time capacity allocation
Public safety: Remote surveillance, incident response and control, smart vehicles
Healthcare: Remote diagnostics and surgery, telemedicine, remote patient monitoring and alerts

Move at the speed of the market.
Hybrid network environments; cloud-centric, software-defined services; virtualization technology

Simplify network management.
Centralized, intent-based policy portals, control and visibility; expertise and tools of a world-class service provider

Streamline costs.
From physical, fixed-cost deployment model to virtualized, cost-optimized, extensible service model

Align digital innovation, security and performance.
Remote work, business continuity/disaster recovery; enterprise branch connectivity; business outcomes and customer experience needs
