

Imagine secure & streamlined business communications from your HQ to the field. It's real & within reach.

Connect your employees seamlessly, virtually anywhere, so they can collaborate with ease. Communicate with customers, when and how they wish, harnessing the power of the cloud.

It's all possible when your broadband connectivity, and the advanced VoIP services it supports, are built for businesses like yours. With our powerful hosted voice solution underpinned by our software-defined wide area networking (SD-WAN) technology, you're ready.

Digital transformation on your terms: VoIP and SD-WAN

Virtual Communications Express (VCE): VoIP and unified communications, right-sized

With VCE, your mobile and branch-office workers get efficient ways to communicate and collaborate. Your customers can connect with you in more ways, as well.

Our cloud-based service for unified communications, VCE, supports these enterprise-grade capabilities, enabling audio and video calling, voicemail, IM, presence and more.

Here's how you benefit:

- You can integrate VCE into your business operations, no matter how you connect to the internet
- Since VCE is hosted by Verizon, it scales easily without a need for large capital expenditures to get started or expand services

Software Defined Secure Branch: Complex networking, simplified by SD-WAN

With Verizon's SD-WAN technology built into Software Defined Secure Branch, you get a streamlined, powerful and secure means of connecting remote teams and branch locations. It works with VCE to give you a robust platform for transformative business communications.

Here's how you benefit:

- Our SD-WAN product simplifies configuration of your voice-and-data communications because it sits on top of your existing network
- It helps you control how bandwidth is allocated to your communications apps based on priorities you set

Verizon VoIP and SD-WAN combine for value-oriented high performance

When you choose Virtual Communications Express with Software Defined Secure Branch, you're advancing your digital transformation in smart ways. For example:

- You can better control the costs associated with higher broadband speeds because you're able to manage bandwidth use with greater precision
- Our SD-WAN solution helps you more easily manage networking complexities without sacrificing security
- With VCE, productivity can skyrocket because phone numbers and systems are combined into one easy-to-use solution

Advanced communications for businesses and budgets like yours

With state-of-the-art VoIP that integrates with streamlined, secure and flexible networking, you're ready. Companies can operate on a more even footing, relative to business communications, with much larger enterprises.

You can get there, your way. Here's how:

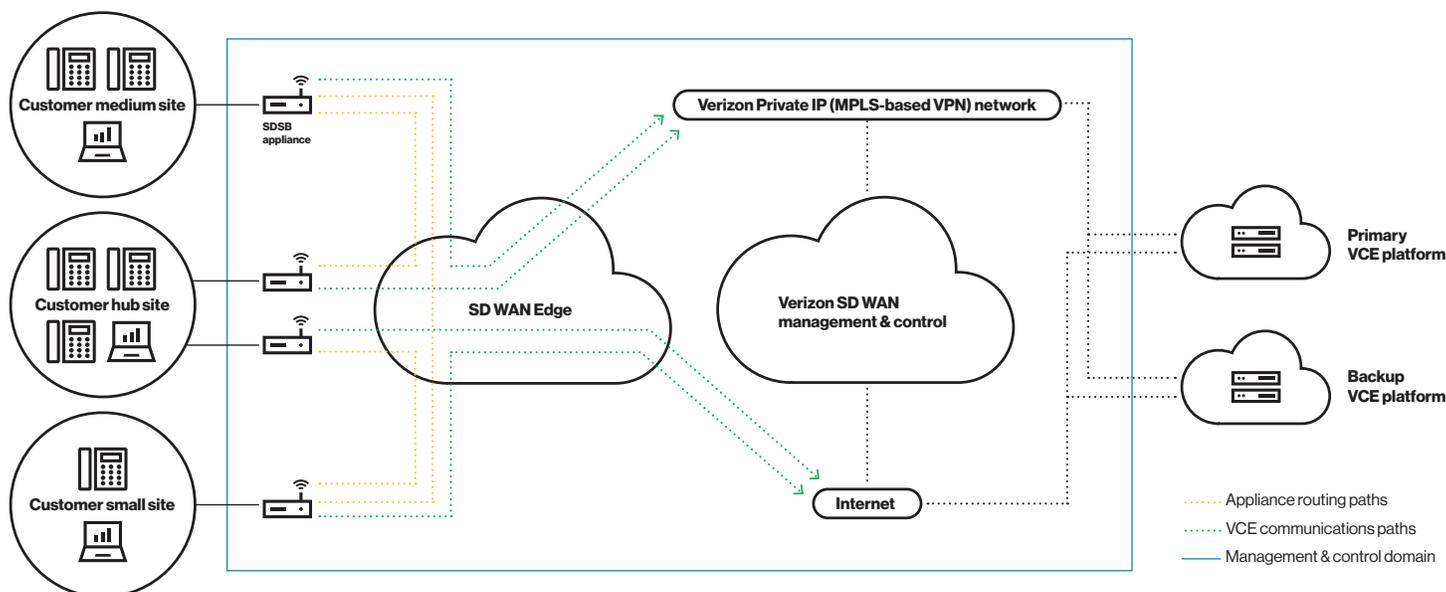

- Install it yourself because VCE is a hosted IP system that's simple to launch over existing broadband service
- Keep your existing network configuration when you choose Software Defined Secure Branch
- VCE and Software Defined Secure Branch are built to coexist so you don't have to wait to network and communicate competitively
- Hand off the heavy lifting because our SD-WAN experts manage your network's security and availability
- Control costs more easily with pay-as-you-go VCE, and with Software Defined Secure Branch that can operate over the public internet
- Business continuity needn't be sacrificed to tight budgets because, with these solutions, sites can be configured as intelligent backups

Why Verizon?

As your one-stop shop for voice and managed services, we make it easy to get the agility, flexibility and performance you need to help secure your network and adapt to the rapidly changing demands of business. Verizon is a leader in delivering networking, security and cloud solutions that provide game-changing virtualization initiatives for the modern, hyper-connected world. We have helped 97% of the Fortune 500 companies solve some of their biggest challenges, and we can help you too.
