

Cisco Jabber

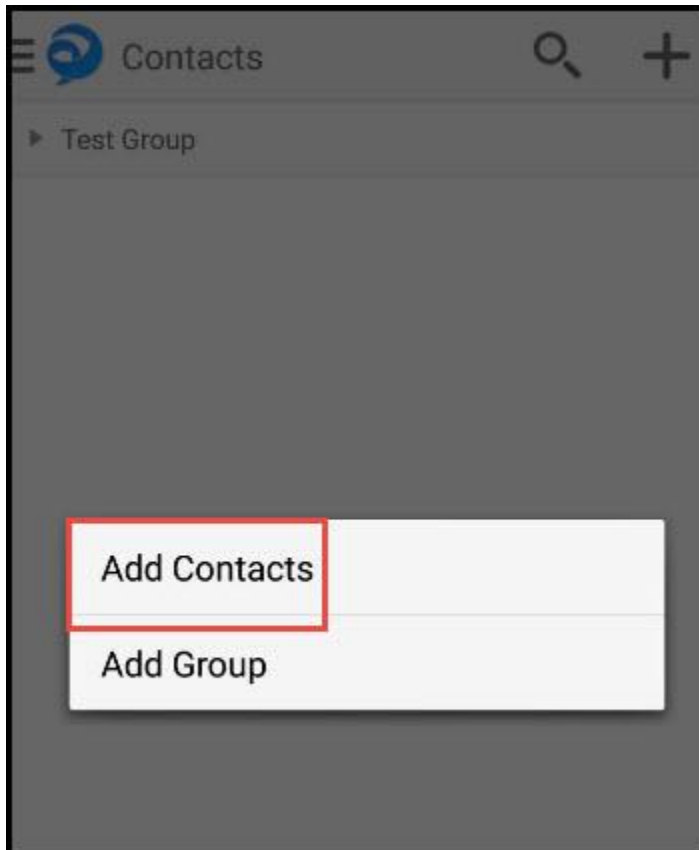

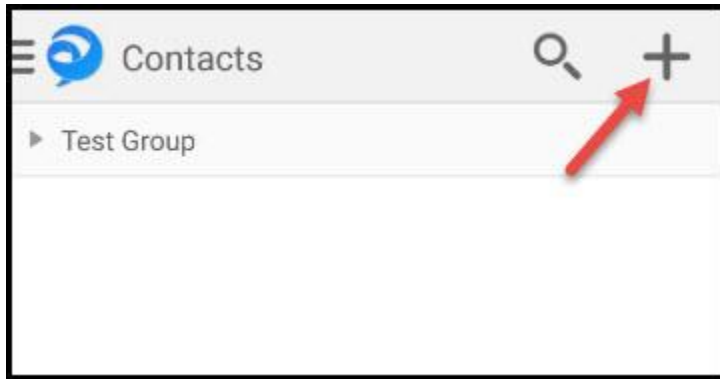

How to Add Contacts in Jabber Mobile for Android

It just takes a couple of steps to set up your contacts in Jabber Mobile.

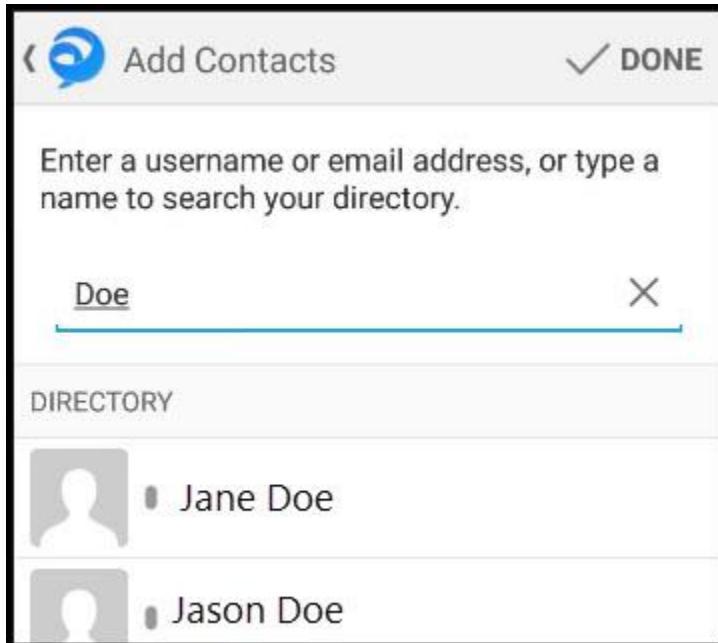

1. To add a new Contact, Click on **Contacts** in the Jabber Mobile window.

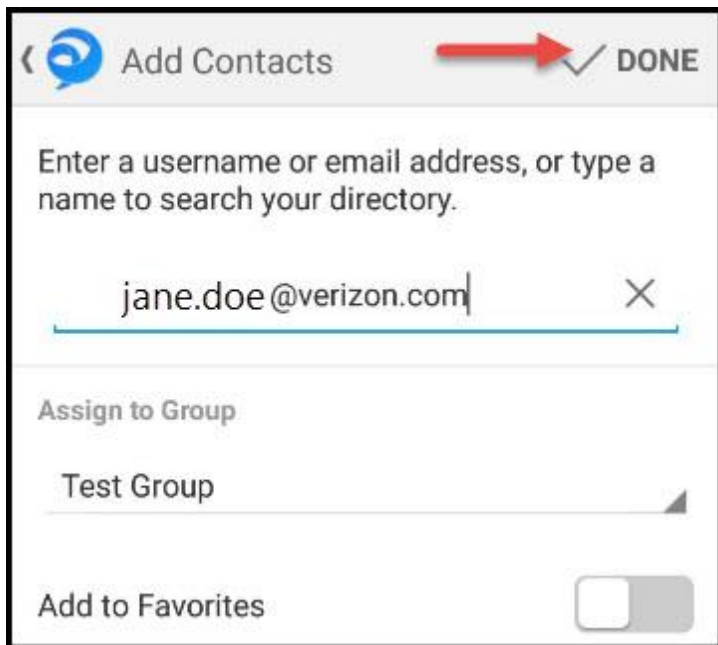

2. Click on the (+) symbol in the top upper right corner and select **Add Contacts**.

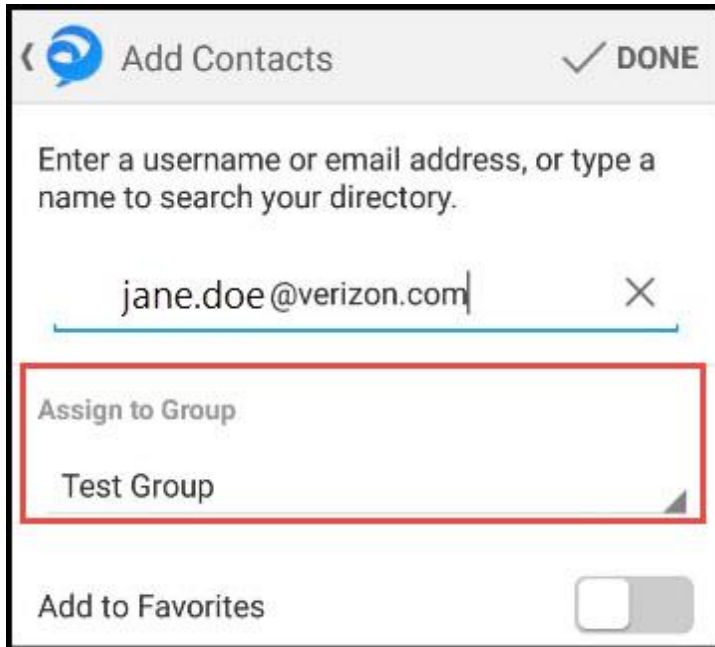

3. Enter the person's name in the Search bar. As you enter text, the search results narrow until the contact is found in the Directory.
If unable to find the contact, try looking up by phone number or email address. Example below.

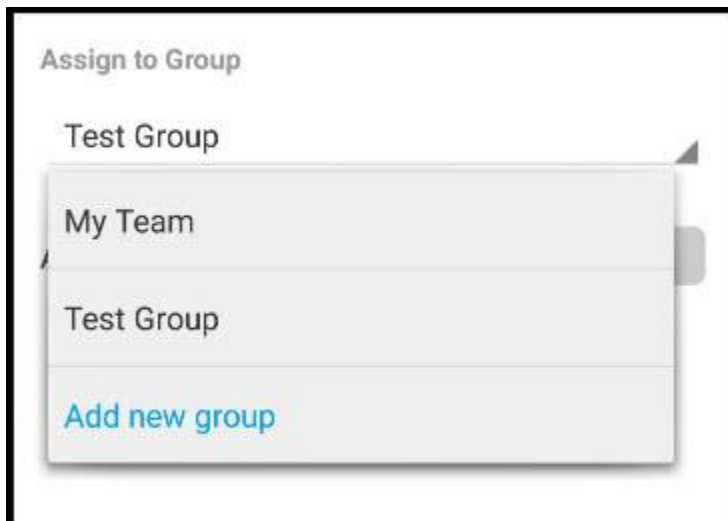

4. Once found, select the **contact** and assign the contact to a **group**. Click **Done**.

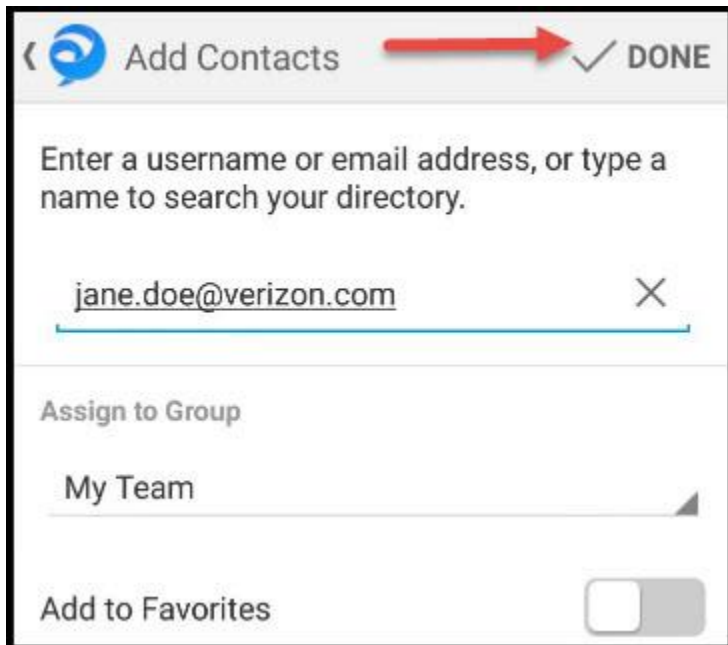

5. If you want to add the contact to another group, click on **Assign to Group**.

6. Select one of the available groups in your listing.

7. Click **Done**.

8. You should now see your contact in the selected group.
