

# Cisco Jabber

## How Do I Change My Location Info in Jabber?

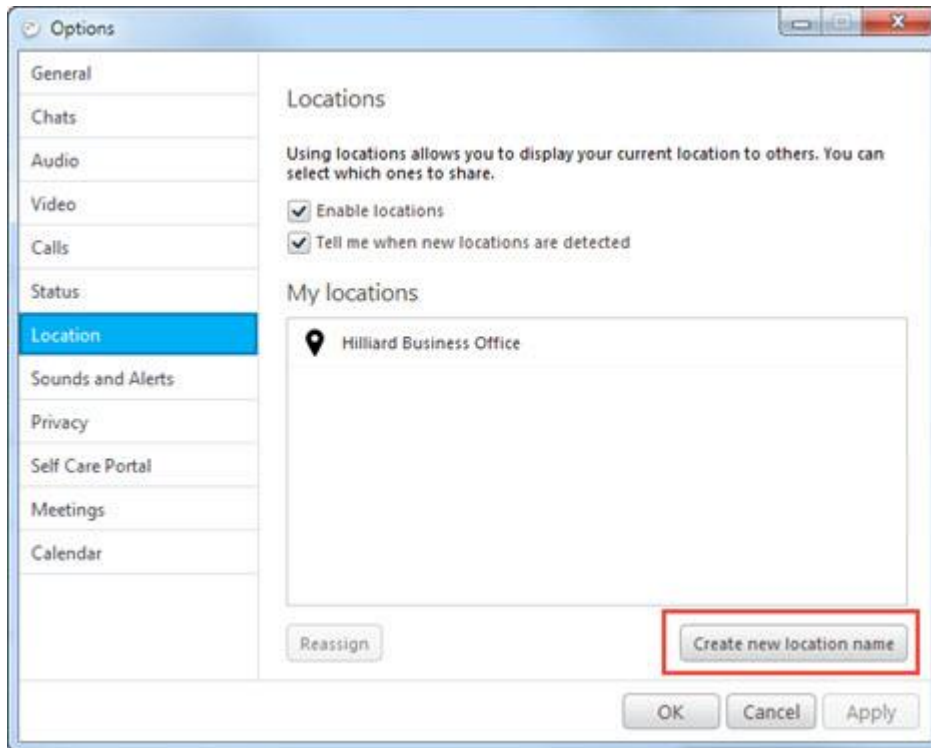

Jabber can show your current location to other users next to your status. Follow the steps below to learn how to change your location information in Jabber.

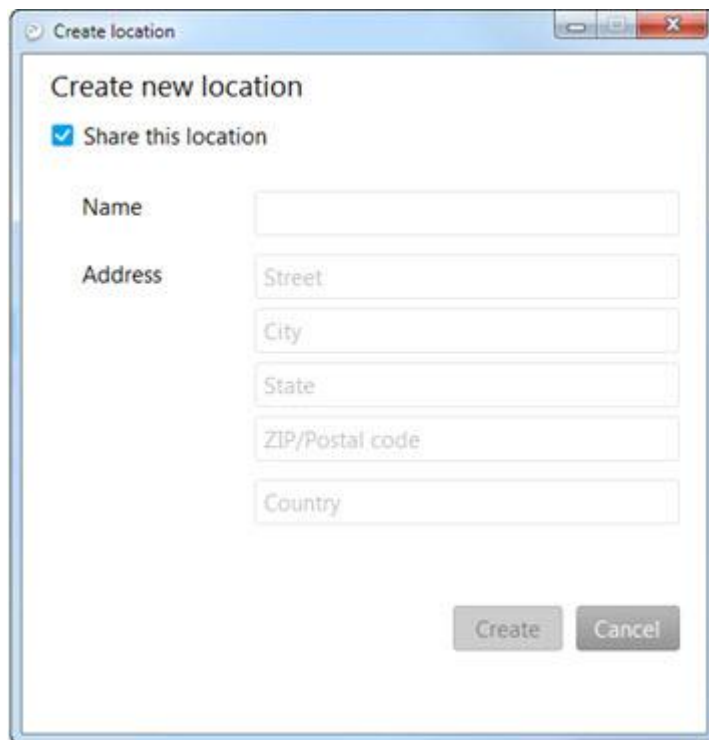

1. To enter a location info based on your status click on the **gear icon** and select **File > Options**.

2. Select the **Location Tab** in the menu and you should see a list of all saved locations for your client.
3. Click on **Create new location name** to add a new location.

4. Enter a Name and Address of your new location and click **Create** when done.

5. If you find that your location is not being properly identified, simply select the correct destination and click **Reassign** to manually update.
