

Cisco Jabber

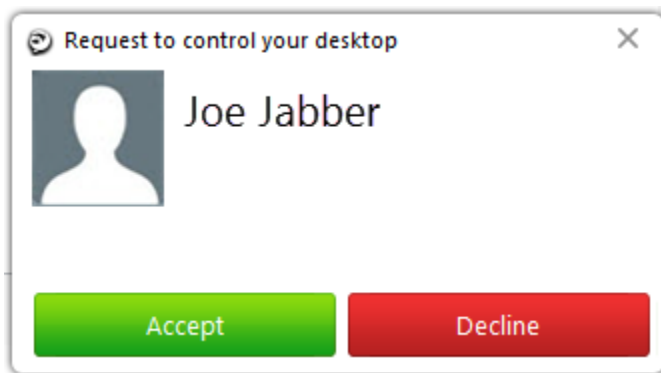

How Do I Request to Control Desktop During Screen Share in Jabber?

When screen sharing in Jabber, you have the option to **request and take control** of the person's desktop that is being shared. To request control, follow these steps.

1. The person must first send the [Jabber Screen Share](#) invite.
2. While viewing the shared screen, if you want to take control of that person's desktop, Click on the **Request Control** button.

3. The person sharing must **Accept** the control request.

4. Once control is granted, you will be able to control the person's shared desktop.
5. To release control back, just click on the **Release Control** button.
