

# Cisco Jabber

## Jabber Automatically Changes Status to Away

There are several reasons why Jabber may change your status. The most common reasons are:

- Your computer has not detected user info for 15 minutes.
- Your screen has been locked.
- You have a meeting scheduled in Outlook at that time.
- You are presenting or sharing in a meeting.
- A device associated with your phone line, such as a desk phone or Jabber, was detected as offline.
