

# Cisco Jabber

## How Do I Turn On Video for Jabber Calls?

Jabber will be updated to **Never start calls with video** enabled in your Jabber options.

In addition, any manual intervention to change this option will default back to the **Never start calls with video** option.

You can still turn on Video for your Jabber calls manually by following these simple steps.

1. Make sure your web camera and headset with microphone are properly connected to your computer.
2. From Jabber, place a call to the other person by dialing their Jabber Phone Number.
3. Once your call is connected with the other person, just click on the green button **Start My Video**.
